SUMMARY

Apple-platform software engineer (Apple Developer Academy, Naples) and author of 10+ shipped projects across iOS, iPadOS, macOS, and visionOS in Swift and SwiftUI. Experienced in on-device machine learning (Core ML, Vision) and spatial computing (RealityKit, ARKit). Shipped a published App Store app and a production website for a paying client. Bachelor's degree in Data Analytics.

SKILLS

Programming Languages: Swift, Python, TypeScript, JavaScript, C++, SQL

iOS / Apple Frameworks: SwiftUI, UIKit, AppKit, RealityKit, ARKit, Core ML, Vision, Combine, SpriteKit, AVFoundation, Xcode

Platforms: iOS, iPadOS, macOS, visionOS

Machine Learning & Data: PyTorch, TensorFlow, scikit-learn, Computer Vision, Anomaly Detection, Data Analysis

Web & 3D: React, Next.js, Three.js, React Three Fiber, WebGL, Blender, USDZ, glTF

Tools & Practices: Git, Firebase, Vercel, REST APIs, CI/CD, MVVM, Agile

EXPERIENCE

Freelance iOS & Web Developer - Self-employed

Naples, Italy | 2025 - Present

- Designed, built, and shipped Pizz'Art Caserta, a production Next.js website (~98% TypeScript) live for a paying restaurant client; built an online reservation flow handling ~300 reservations/month, wired to an email pipeline, internationalized and SEO-optimized, deployed on Vercel behind Cloudflare.
- Published InShorts Italia, a native iOS news aggregator with 400+ App Store downloads; aggregates 70+ Italian sources across 9 categories via a Firebase Cloud Functions backend (RSS pulled every 2 hours, plus AI summarization).
- Built and released applications across iOS, iPadOS, macOS, and visionOS using Swift and SwiftUI.

PROJECTS

LiveChess - Spatial Chess for Apple Vision Pro (team project)

Technologies: Swift, SwiftUI, visionOS, RealityKit, C++

- Integrated the Stockfish C++ engine into Swift for an adjustable-strength AI, move analysis, and opening book.
- Built online multiplayer over the Lichess API (OAuth PKCE authentication, live NDJSON game and event streaming, matchmaking).
- Developed an immersive RealityKit board with custom USDZ pieces, game review, and puzzle modes.

PinballVision - visionOS Pinball Game

Technologies: visionOS, RealityKit, ARKit, SwiftUI

- Built a fully playable Apple Vision Pro pinball game controlled by ARKit hand tracking (pinch to flip).
- Engineered a procedural physics table from RealityKit physics bodies, real-time AVAudioEngine audio synthesized with zero asset files, a combo multiplier up to 10x, and Game Center leaderboards.

SignBridge - On-Device ASL Recognition Tutor

Technologies: Swift, Core ML, Vision, SpriteKit

- Implemented real-time recognition of the full 26-letter ASL alphabet at 60 FPS, using Vision hand-pose detection feeding a custom Core ML model with prediction smoothing.
- Built spell-to-play SpriteKit mini-games; runs fully on-device with no server dependency.

CellularModem-ML - Real-Time Network Anomaly Detection

Technologies: Python, PyTorch, TensorFlow, scikit-learn

- Built a streaming anomaly-detection system extracting features across 4 protocol types (TCP, UDP, IP, QUIC).
- Developed an ensemble of 3 model types (Isolation Forest, LSTM in PyTorch, Autoencoder in TensorFlow) achieving sub-100ms inference, with a Streamlit monitoring dashboard.

BetterFinder - macOS Finder Alternative (team project)

Technologies: Swift, SwiftUI, AppKit

- Authored the Smart and Batch Rename module: rule-based renaming with live preview and conflict detection.
- Contributed to a power-user file manager featuring a built-in terminal, fast search, and syntax-highlighted file preview.

EDUCATION

Apple Developer Academy - University of Naples Federico II

Naples, Italy | 2025 - 2026

iOS Software Engineering and App Foundation Program.

University of Campania "Luigi Vanvitelli" - Bachelor's Degree, Data Analytics

2022 - 2026

Thesis: Support Vector Machine land-cover classification of 27,000 EuroSAT satellite images into 10 classes; HOG feature extraction and comparison of 3 kernels.

LANGUAGES

English (Professional), Italian (Fluent)
